DORMAKABA – STRIPE

PROJECT OBJECTIVE

Develop a simple web application that allows purchasing products listed in USD and CAD, with Stripe automatically calculating and adding taxes (GST/HST/PST/QST and U.S. state-level sales taxes) during checkout.

The application will support visual customization (logo, texts) and Stripe Checkout. Stripe Tax will be used to automatically calculate and report taxes, while also being designed to integrate with external data systems and third-party services such as Interpayments for enhanced tax compliance.

The app will support:

- Custom branding (logo, texts).
- Stripe Checkout integration.
- Stripe Tax for automatic calculation and reporting.
- Extensibility to integrate with external systems and third-party services (e.g., Interpayments).

PROJECT SCOPE

- Initial analysis and requirements documentation (products, prices, branding, taxes).
- Stripe configuration: enable Stripe Tax, create products/prices, assign Product Tax Codes.
- Frontend: product page, purchase and order confirmation pages, customizable UI.
- Backend (Node/Serverless): endpoints for Checkout Session (automatic_tax), webhooks for tax breakdown and payments.
- Testing: simulate Canadian and U.S. addresses to validate tax calculations across different provinces/states.
- QA & Deployment: bug fixing, documentation, and handover.

WORK PHASES

Phase 0 – Documentation (1 week)

Phase 1 – Stripe Configuration (1–2 weeks)

Phase 2 – Architecture (1 week)

Phase 3 – Backend (1–2 weeks)

Phase 4 – Frontend Vue (2–3 weeks)

Phase 5 – Stripe Integration (1–1.5 weeks)

Phase 6 – QA (1 week)

Phase 7 – Documentation & Deployment (1 week)

RISKS & CONSIDERATIONS

- Access to Stripe account / permissions.
- Tax registrations (client responsibility).
- Correct assignment of tax codes per product.
- Multi-currency complexity (USD/CAD).
- Stripe Tax cost (charged by Stripe per transaction).
- Webhook reliability and secure configuration.
- Jurisdictional complexity:
 - Canadian provincial rules (e.g., Quebec QST) require additional testing.
 - U.S. state-level regulations (sales tax nexus, exemptions, local taxes) introduce significant complexity and must be validated during QA.

DELIVERABLES

- Web application with Stripe Checkout + Stripe Tax integration.
- Backend with endpoints and webhook management, designed with an API-first and extensible architecture to allow future integration with ERPs, CRMs and third-party tax/compliance services (e.g., Interpayments).
- Stripe configuration: products, prices, tax codes.
- Documentation for:
 - Creating new products/prices and reviewing reports.
 - Integration guidelines for external systems and third-party services.
- Deployment to dormakaba Azure infrastructure.
- User manual for the dormakaba team, including guidance on extensibility and ongoing maintenance.

PREREQUISITES & ASSUMPTIONS

- Stripe account (test & live) and necessary roles/access.
- A new subdomain (payments.dormakaba.com) will be created to host the web application, ensuring separation from the main domain to prevent overload and maintain performance.
- List of products and base prices in USD (and CAD if required).
- Logo, texts (copy), color palette, mockups (if available).
- Basic tax info: business origin address (for Stripe origin config) and GST/HST/QST registration status in Canada.
- Webhook access (public URL) or setup instructions for deployment.

HOW DO WE WORK & ROADMAP

WEEK 1 WEEK 2 WEEK 3 WEEK 4 WEEK 5 WEEK 6 WEEK 7 WEEK 8 WEEK 9 WEEK 10 WEEK 11 WEEK 12 SPRINT 13

SCRUM: MONTHLY CYCLE

At Tailor Hub, we follow a clear, agile, and collaborative methodological approach, based on applying Agile Scrum as our work framework.

Our approach is structured around 15-day sprints, allowing us to break down complex projects into manageable phases, enable constant feedback, and iterate quickly while keeping a strong focus on delivering real value. This dynamic ensures active involvement of internal teams, continuous alignment with project objectives, and sustainable results over time.

Our approach is fully results-oriented, supported by monitoring mechanisms, quality control, and knowledge transfer.

Scrum ceremonies are a key pillar of our methodology, as they enable clear planning, daily coordination, deliverable inspection, and continuous improvement in every cycle.

- **Sprint Planning:** At the start of each sprint, our team defines which work from the Product Backlog it commits to completing and how it will approach it.
- **Daily:** 15-minute stand-up meetings where each squad member shares what they did yesterday, what they'll do today, and whether they're facing any blockers. These meetings help with coordination and early problem detection.
- **Review:** At the end of the sprint, the team presents the product increment to the Product Owner and stakeholders, reviews the achievements, and gathers feedback.
- **Retrospective:** After the Review, the team reflects on how they worked and agrees on improvements for the next sprint.

BUDGET

BUDGET

Role	Team	Dedication	Time	Cost
PROJECT MANAGER	1 PROFILE	20%	9 - 12 WEEKS	4.608 € - 6.144 €
MID FRONTEND ENGINEER	1 PROFILE	100%	5 - 7 WEEKS	12.000 € - 16.800 €
SENIOR BACKEND ENGINEER	1 PROFILE	100%	7 - 9 WEEKS	20.160 € - 25.920 €
DEVOPS ENGINEER	1 PROFILE	100%	2 WEEKS	6.000 €
LEAD DESIGNER	1 PROFILE	100%	2 WEEKS	4.800 €

TOTAL :

36.768€ - 48.864€

*VAT NOT INCLUDED.

ISO 27001 CERTIFIED. NOT JUST A BADGE. OUR WAY OF WORKING.

We're certified under ISO 27001, the most demanding international standard for information security management.

But for us, it's more than a seal. It's a mindset. Every line of code, every process, every dataset we handle is protected by robust, audited systems that evolve continuously.

When you build with us, you're not only betting on innovation. You're choosing trust, by design.

Because at Tailor, security isn't a promise. It's a guarantee.
